

SHDH2368 Motion Media

Individual Assignment 1 — Generative Motion Poster

Introduction

This assignment is designed to assess your practical capability in generative media, specifically focusing on animation, procedural visual generation, and compositing. Drawing from the concepts covered in Weeks 1–6, you are required to recreate an existing poster as a generative motion poster using TouchDesigner.

Task (Individual)

In this assignment, you must select an existing static poster and recreate it as a generative motion poster in TouchDesigner. Your motion poster should apply appropriate techniques such as animation, procedural visual generation, image manipulation, compositing, feedback, or audio/data-driven responses.

Requirements:

Source selection: Choose an existing poster (advertisement, film poster, exhibition poster, etc.) with a clear visual identity.

Motion translation: Translate the static composition into a dynamic motion version while preserving recognisable elements of the original.

Technical range: Use at least three of the following: animation, procedural generation, compositing, feedback, audio reactivity, or data-driven control.

Creative interpretation: Your motion poster should offer a thoughtful reinterpretation rather than a literal reproduction of the original.

Presentation / Documentation (if applicable):

Video export: Submit a screen recording or rendered video of the motion poster (MP4/MOV, 15–30 seconds, loop-friendly).

TouchDesigner project: Submit the complete .toe project file together with any required assets in a clearly organised folder.

Design rationale: Include a short statement (150–250 words) explaining your source choice, concept, and the techniques applied.

Submission

File format: ZIP.

Submit the required file(s) to the e-Learning platform (Blackboard).

Deadline: Date: [20 OCT 2026] Time: HKT [23:59]

For proper documentation and assessment of your assignment, please compress the required items into a single ZIP file and submit this file to the e-Learning platform (Blackboard).

Please name your file according to the following format:

"[English full name]_[student number].[extension]"

For example:

"ChanTaiMan_123456.[extension]"

The maximum file size for submissions on the e-Learning platform (Blackboard) is 250MB. Ensure your submission is compressed to adhere to this limit. If you encounter difficulties reducing the file size below this threshold and are unable to upload the file, you have the option to upload your work to a cloud storage service (e.g., Google Drive / OneDrive). After uploading, send the download link to lazarus.chan@cpce-polyu.edu.hk. This should be a last resort only after attempting and failing to compress your materials sufficiently. The timestamp on your email will be taken as the time of submission.

Please name your compressed folder according to the following format:

"[English full name]_[student number].zip"

For example:

"ChanTaiMan_123456.zip"

Plagiarism

You are strongly advised to pay attention to the rules and guidance notes regarding plagiarism, how sources should be referred to, and bibliography referencing as stipulated in the Student Handbook.

The College may take disciplinary actions against students when there is evidence of collusion between individuals. The work of others which is included in the assignment must be attributed to its source (a full bibliography and a list of references must be submitted). Failure to observe such requirements may lead to serious consequences for your study in this subject and your registration at the College. Please refer to the Section "Penalties for Offences" in the Student Handbook for details.

You are also strongly advised to review the hot tips about plagiarism and how to avoid it with reference to the Plagiarism Booklet.

In principle, CPCE considers GenAI tools as positive and creative forces in education and encourages their use in learning, teaching, and assessment. However, extensive copy-pasting from AI-generated content without citation is considered plagiarism.
