Individual Assignment 2 — 2D or 3D Interactive Narrative

Introduction

This assignment is designed to assess your capability in interactive narrative and spatial design, specifically focusing on concept development, user interaction, and visual direction. Drawing from the concepts covered in Weeks 7–12, you are required to develop a 2D or 3D interactive storyline or experience using TouchDesigner.

Task (Individual)

In this assignment, you must develop a 2D or 3D interactive narrative or experience using TouchDesigner. The project should present a clear concept, narrative structure, user interaction method, and visual direction. You may design an interactive visual journey, spatial experience, screen-based story, generative environment, or immersive audiovisual work.

Requirements:

Concept and narrative: Define a clear concept and narrative arc that guides the user's experience.

Interaction design: Implement at least one method of user interaction (e.g., mouse, keyboard, audio, or simple sensor input).

Visual and spatial quality: Develop a consistent visual direction with appropriate use of 2D or 3D elements, colour, motion, and composition.

Technical integration: Demonstrate competent use of TouchDesigner operators and node networks to realise the interactive experience.

Presentation / Documentation (if applicable):

Video documentation: Submit a screen recording that demonstrates the interactive experience in use (MP4/MOV, 1–2 minutes).

TouchDesigner project: Submit the complete TouchDesigner .toe project and all assets in an organised folder.

Presentation: Present the project in class, explaining the concept, interaction design, technical approach, and reflection.

Submission

File format: ZIP.

Submit the required file(s) to the e-Learning platform (Blackboard).

Deadline: Date: [01 NOV 2026] Time: HKT [23:59]

For proper documentation and assessment of your assignment, please compress the required items into a single ZIP file and submit this file to the e-Learning platform (Blackboard).

Please name your file according to the following format:

"[English full name]_[student number].[extension]"

For example:

"ChanTaiMan_123456.[extension]"

The maximum file size for submissions on the e-Learning platform (Blackboard) is 250MB. Ensure your submission is compressed to adhere to this limit. If you encounter difficulties reducing the file size below this threshold and are unable to upload the file, you have the option to upload your work to a cloud storage service (e.g., Google Drive / OneDrive). After uploading, send the download link to lazarus.chan@cpce-polyu.edu.hk. This should be a last resort only after attempting and failing to compress your materials sufficiently. The timestamp on your email will be taken as the time of submission.

Please name your compressed folder according to the following format:

"[English full name]_[student number].zip"

For example:

"ChanTaiMan_123456.zip"

Plagiarism

You are strongly advised to pay attention to the rules and guidance notes regarding plagiarism, how sources should be referred to, and bibliography referencing as stipulated in the Student Handbook.

The College may take disciplinary actions against students when there is evidence of collusion between individuals. The work of others which is included in the assignment must be attributed to its source (a full bibliography and a list of references must be submitted). Failure to observe such requirements may lead to serious consequences for your study in this subject and your registration at the College. Please refer to the Section "Penalties for Offences" in the Student Handbook for details.

You are also strongly advised to review the hot tips about plagiarism and how to avoid it with reference to the Plagiarism Booklet.

In principle, CPCE considers GenAI tools as positive and creative forces in education and encourages their use in learning, teaching, and assessment. However, extensive copy-pasting from AI-generated content without citation is considered plagiarism.
